

JULIUS-K9® - Inventor of the dog harness with interchangeable patches and hook & loop system on the

chest.

Perfect ergonomics

Thanks to a major development in the IDC Powerharness the chest strap forwards the power lines of the leash.

Breathable, skin friendly inner liner

We normally don't pay enough attention to these great properties. The OEKO-TEX material is manufactured to the highest standards in human clothing manufacturing. The liner is breathable and skin friendly.

Heavy duty buckles

The high-quality buckles of an IDC-Powerharness are rigorously tested and checked. This is especially vital in the winter, these buckles work perfectly and don't break even in the coldest weather.

Reflective edges and chest strap

One of the most important functions of an IDC-Powerharness is that it works as well as a high visibility vest. The grey line of the chest strap and the edges of the harness are made of reflective materials, so the walking dog is visible in the dark from an even greater distance.

Side Bag fixing option

Side bags are available in 3L and 4L versions for the bigger Powerharnesses. sizes from 0 to 4. A smaller IDC-Universal side bag has also been available since 2013. With a 250 cm capacity it's ideal to carry personal documents, vaccination papers, a cell-phone and dog treats.

Torch holder

The torch holder is made of rigid elastic, so it is very stable, the torch cannot slip out of the holder. It's useful for night walks to follow your dog. Thanks to the ergonomic design you don't have to worry that your dog could be snagged because of the loops. The torch holder is made of high quality German materials. It also allows the use of side bags simultaneously.

It's essential for search and rescue dogs and for every service dog that works in the dark.

Removable interchangeable patches

There are about 1000 different interchangeable patches in various languages in stock, but you can also order a customized one especially for your dog. The IDC-Powerharness comes complete with a pair of fluorescent JULIUS-K9 series labels which glow in the dark.

Handle lock with new snap

The new handle fixing option on the IDC-harness allows for 4 different variations. You can fix only the steel ring, only the handle, both of them or neither of them. With these options you can minimize the dog's chances of being blocked. It's really important especially for hunting dogs along with search and rescue dogs.

Note: If the dog is snagged by bushes in a place that is not visible, the IDC-Powerharness allows for free movement backwards, so that the dog can escape.

Available with safety lock in the color black

The hook and loop mounting safety lock was developed in 2004 by Julius-K9 especially for service dogs. This practical accessory increases the load capacity of the buckle under the chest by 60 kg. It ensures for safe use, even in the case of damaged (chewed) buckles. It has been used by the Police Service Dog Unit of London since 2013.

Color: black

ONLY AVAILABLE WITH CERTAIN HARNESSSES!

Certified Quality

Highest quality certified by independent crash test/tensile test. The buckle of the product opened at 300 kg, but the harness itself did not break.

Not for tie-out!

The first dog harness with interchangeable patches from the inventor! Since 1997!
